In order to function as a competent clinician, one must develop competence in diagnosing and effectively treating a variety of problems with which they are confronted. In order to do this one must be thoroughly familiar with a variety of treatment modalities. 5. Learn how to develop and implement treatment plans including cultivating the ability to assess progress and formulate timelines.
6. Learn the value of and how to keep effective treatment records.
7. Understand how to effectively utilize supervision to facilitate quality treatment.
8. Understand the role of psychotropic medications and mood altering chemicals in the treatment of mental and emotional disorders.
