IT 605 Summer 2008

Name: IT 605 Summer 2008

Subject: Groeling

Category:

Abstract:

Keywords: INTERNET AND THE WEB IN MINISTRY

IT 605/3.0 Credit Hours
Summer 2008
8:30am-5:00pm
BC330
Instructor: Jeff Groeling
Class size: 16

Email: JeffGroeling@asburyseminary.edu
Phone: (260) 579-7224
Snail Mail:
    Jeff Groeling
    Asbury Seminary
    204 N. Lexington Ave.
    SPO 808
    Wilmore, KY 40390

WELCOME

I would like to welcome you to IT 605, The Internet and the Web in Ministry. I encourage you to look at my resume within First Class (directory/jeff groeling/resume) to find out more about me. I look forward to beginning this journey with you and learning more about each of you over the course of this class.

COURSE DESCRIPTION

This course is designed for the computer user wanting to gain experience in the use of the World Wide Web (WWW) as a tool for effective ministry. Some experience with basic
computer operation is required. Consideration will be given to seven areas: (1) networks, the Internet and servers, (2) WWW overview, (3) searching the Web, (4) imaging and web editing software, (5) practicalities of web site setup, (6) organizing and managing a web site, and (7) advanced web technology and future directions of the web.

The format for this course will include readings, powerpoint highlights of the readings, projects, group participation and discussion, and submission of written work.

REQUIRED READINGS

Lochhead, David, Shifting Realities: Information Technology and the Church. WCC Publications, 1997

Stephenson, Mark, Web-Empower Your Church: Unleashing the Power of Internet Ministry, Abington Press, 2006

The texts can be picked up or ordered through the ATS Bookstore (859)858-2293.

** Related required readings will be provided online within the context of the course. Please see the bottom of this document for online readings. Also, when referring to a course text in course discussion, please use the url or author name and page number so the rest of class can understand the context of the reference.

GRADING

20 % Participation
- In class discussion
- Answer module questions
- Team review of readings
- Completion of readings

40% Projects
- Good site/bad site?
- Internet scavenger hunt
- Setting up a website HOWTO
- 3 page website
- Website flowchart

30% Final Project - Setting up and creating a website

10% Test

Late assignment policy: Each module assignment is due before the start of the following
module. Assignments or papers that are late are marked down 1/3 of a letter grade for each day late.

COURSE OVERVIEW

The class is organized into 7 modules covering various aspects of the Internet and the World Wide Web and their application to ministry.

PROJECT OBJECTIVES AND DESCRIPTIONS

The student showing competence in this course will be able to:

Understand basic network design.
Conduct basic web searches.
Organize, design, create and manage a website
Understand advanced web technologies.

Module questions: Answer questions for each module and submit to class folder.

Team review of readings: After being assigned teams, each team will divide up the readings for each module and write at least a 1 to 2 page summary of information for each article and then submit the group's summary for that module to the IT605 folder.

Good site/bad site: Students are given a sheet of websites to evaluate. For each website, students will write a complete sentence about whether it is a good or bad site *AND* why utilizing good design principles as rationale.

Internet scavenger hunt assignment: Students are given a list of persons, places and things to find on the Internet. Using a different search engine for each question: A) list the search engines used to find the answer for that question, B) list the answer of the question and C) give me the url of the site where you found the answer (not the search engine url).

Three page website creation: Using Seamonkey Composer, Macromedia Dreamweaver or an equivalent WYSIWYG web editing program, students will setup and create a three page linked web site including relevant graphics. Upload the finished html and image files to First Class or some other site where they can be graded by the instructor and then report the url to the instructor.

Website flowchart: Draw at least a three tiered, four category website electronically using an image editing program or the org chart function of MS-Word or some other design program. Use standard flowchart diagramming. Examples will be made available. For more flowchart information see: http://mot.vuse.vanderbilt.edu/mt322/Flow.htm

Setting up a website HOWTO: Students will be expected to outline specific steps they would go through to set up a website as if explaining it to someone unfamiliar with
website setup. Treat this assignment as if you were going to set up a website in actuality yourself (and to remind you a few years down the road). Setting up a website is at least a 4 step process. You will need to provide RATIONALE (for example, which web hosting service did you use? Why? etc.) for each decision: 1) find a host for the website, 2) set up a domain name, 3) select web editing software, 4) provide a means for uploading web pages.

Final Project: Using Seamonkey Composer, Macromedia Dreamweaver or an equivalent WYSIWYG web editing program, students will setup and create a web site covering a topic pre-approved by the instructor after viewing the flowchart assignment. Students with more technical expertise will be encouraged to try more advanced technologies such as button rollovers, CSS, or setting up forms, forums or blogs. As part of this project, students will be required to register a domain name and sign up for space with a web host. After website creation, the associated pages and images will be uploaded to the website for correction and grading.

Test: Students will be given a test the last week of class. Questions will be drawn from content covered over the duration of the entire class including readings, powerpoint and discussion.

CLASS SCHEDULE

**Module 1 - Course introduction & networks, the Internet & servers**
Topics
- Short history of the Internet
- Connections to the Internet, ISPs, modems & dsl
- Security: firewalls, viruses, spam, phishing
Devotion
Introduction and chapter 1 of Lochhead
Forward and introduction of Stephenson
Online module 1 readings
Assign teams
Assignments:
  - Readings
  - Introductions
  - Answer and respond to module questions
  - Team review of readings

**Module 2 - World Wide Web overview**
Topics
- Browsers
- Basic design
- Basic HTML tags, Source code
Devotion
Lochhead chapters 2 and 3
Stephenson chapter 5
Online module 2 readings
Assignments
  Readings
  Answer and respond to module questions
  Team review of readings
  Good site/bad site project

Module 3 - Searching the web
Topics
- Google: searching web, newsgroups & images
- Other search engines
Devotion
Lochhead chapter 4
Online module 3 readings
Assignments
  Readings
  Answer and respond to module questions
  Team review of readings
  Complete Internet scavenger hunt project

Module 4 - Imaging and web editing software
Topics
- images, cameras, scanners
- Web editing software: Seamonkey composer
- Image editing software: QV
Devotion
Lochhead chapter 5 and 6
Stephenson chapter 9
Online module 4 readings
Assignments
  Readings
  Answer and respond to module questions
  Team review of readings
  Three web page project

Module 5 - Practicalities of website setup
Topics
- finding an ISP, host, registering a domain name, uploading
 Devotion
Stephenson chapter 8
Online module 5 readings
Assignments
  Readings
  Answer and respond to module questions
Team review of readings
Setting up a website HOWTO project

Module 6 - Organizing and managing a website
Topics
- Planning: setting up a web site, management -- team or individual?
- What is the goal of the website? Who is your target audience? How will you get there?
- Flowchart, organization
Devotion
Stephenson chapter 1, 2, 3, 4 and 10
Online module 6 readings
Assignments
  Readings
  Answer and respond to module questions
  Team review of readings
  Flowchart a website project

Module 7 - Advanced web technology and the future of the web
Topics
- Forms, scripting, javascript, java, flash, cms
Devotion
Stephenson chapter 6, 7 and 11
Online module 7 readings
Assignments
  Readings
  Answer and respond to module questions
  Team review of readings
  Work on final project
  Take test & fill out course evaluation

ONLINE READING LIST
This is the online reading list for IT 605. Because of the changing nature of technology it is difficult to find books that are not obsolete in content, therefore, the majority of readings for the class are online where more current information can be found. Please use your best judgment in reading these articles. I do not expect you to follow every hyperlink associated with each article, but I do expect you to understand the underlying concept in each article.

Disclaimer: Some of these links may expire between the time they are checked and the time class starts. If a link does not work for you, try again at a later time. If it still does not work, please notify the instructor ASAP.
